

KUNSTSTOFFPRODUKTE

INNOVATION IN PLASTICS

History

We, the Company Willy Büchner Metal and Plastic Products, are a powerful enterprise - rich of tradition and specialized in producing technical plastics parts. Apart from thermoplast injection molding, we also carry out the assembly of smaller components.

Highest priority is to satisfy the requirements of our customers.

Efficiency

Our efficiency includes the entire production process, starting with the mould design throughout to the final injection molding or the assembly of the components is done.

Mould Design / Toolmaking

Due to a strategic company cooperation in the field of toolmaking you will profit as a customer by our well-experienced staff in our design, construction and injection-molding departments.

Synergies can be used in an ideal way and can positively influence the product implementation.

Injection-Molding

A machinery of 34 injection-molding-machines of the new generation with 250-2220 KN make a production on highest standards possible. We are able to work with any plastics, e.g. POM, PBT, PA6, PA6.6, PETP, PPE, PMMA, PC and APEC. Even very special plastics are worked on, like PPS.

The use of electronic injection-molding-machinery makes it possible to combine highest electro mechanic precision with an economic power consumption.

Our machineries are equipped with an automatic handling for pick and place of components.

Assembly

Besides the injection-molding-production we also assemble small components, which is carried out in an automated production with integrated control.

Controlling

In addition to our manual component controlling we also check initial and further samplings and conduct statistical process controlling.

Efficiency and Production Range

Quality Management

Ultimate ambition of our quality policy is to gain and assure the satisfaction of our customers as the basis of a sustainable and successful enterprise development. Our quality management system is certified by ISO DIN EN 9001:2008 and ISO/TS 16949.

The quality of our goals is the quality of our future

Our specialised professionals accompany your product from the day production begins to the final day of the series production. Well-educated and trained staff who monitor all production processes and our continuous quality management ensure successful smooth production. We avoid production interruptions and repairs, thereby helping you maintain the cost effectiveness and consistent quality of your product.

Customer satisfaction is the foundation of our company's sustainable economic success and is guaranteed by achieving the following objectives:

- implementing customer product and delivery requirements
 - zero error production
 - on-time delivery
- continuous improvement of all operational processes
- structured workflow processes based on the 5S method
- careful handling of operational facilities
- efficient working methods

We keep an eye on your products.

Equipment:

- 34 injection-molding-machinery of 250-2200KN
- Ultrasonic sound welding plant
- Central granulate conveying system
- Diverse automatic assembly machinery
- A multitude of equipment to produce components
- Punching-Machine
- Conventional toolmaking for on-site maintenance and repairs

Technology

Production area: 2100 m² injection-molding –production
450 m² assembly

Storage area: 2160 m² high bay rackings

Offices: 1100m² management

Area in total: 5810 m²
